

Aikam Singh

Ann Arbor, MI | aikam@umich.edu | (818) 966-3496 | linkedin.com/in/aikamsingh | github.com/AikamSingh

Education

University of Michigan, Ann Arbor, MI, GPA 3.9/4.00
Bachelor of Science in Computer Engineering, Expected May 2029

Work Experience

ProRata.ai, Pasadena, CA

Summer Business Intern

June 2025- July 2025

- Automated article ingestion from RSS feeds using Python, streamlined partnership workflows for 20+ content partners

Summer Software Engineering Intern

June 2024-August 2024

- Participated in building and testing of LLM models
- Gathered, cleaned, and structured a 5.5B+ multimodal dataset for training fact-checking models, enabling large-scale validation of outputs from ChatGPT and Meta AI
- Stress-tested LLM prototypes with ML engineers, documenting hallucinations and bias issues; feedback directly influenced model iteration

Project Experience

University of Michigan Solar Car, Microsystems

July 2025-Present

- **2026 Race Crew:** Drove the solar car cross-country (Michigan to California) as part of a 20-40hr a week commitment spanning full winter semester; maintained, diagnosed, and repaired electrical systems on the road under race conditions
- **Steering Wheel PCB (Altium):** Designed and manufactured PCB integrating buttons, switches, and OLED display for real-time driver telemetry; validated functionality with oscilloscope and logic analyzer, tested CANBus communication, and integrated verified hardware into vehicle
- Rewrote steering wheel firmware in C (STM32, RTOS) to improve system reliability and CANBus interface

Smartwatch Embedded Project

February 2026-Present

- Developed firmware for smartwatch using embedded C (RTOS, I2C) and ESP32 chip; features include step tracking, real time stopwatch, wireless connectivity

University of Michigan Transportation Institute

January 2026-Present

- Modeling weather conditions to assess driver ability using Unreal Engine on student research team

Polytechnic High School Pasadena Solar Car

August 2021-July 2025

- Co-led a team of 15 students; placed 2nd in 2023 and 2025 Texas Solar Car Challenge
- Designed chassis CAD, manufactured Li-ion battery pack, designed high voltage systems, carbon fiber layup of aeroshell

Skills

Programming: C, C++, Python, MATLAB, Java, Javascript, HTML/CSS

Tools: Altium, Fusion 360, Siemens NX, Visual Studio Code, STM32Cube IDE, GitHub, Blender

Technical Interests: Integrated Circuits, Embedded Systems, Robotics, Automation
